Full stack developer

Full-stack Software Engineering undergraduate with hands-on experience building scalable, production-ready applications. Proficient in the MERN stack and SQL, with a proven ability to design relational schemas, secure REST APIs, and deliver responsive, user-centric interfaces. Skilled in React, TypeScript, Node.js, Express, and relational databases (MySQL, SQL Server), with additional experience in UI/UX design using Figma. Proven ability to design relational schemas, build secure REST APIs, and deliver responsive, well-tested web applications independently and in team settings. Seeking a Full-Stack Developer internship to apply technical skills and contribute to real-world engineering solutions.

EDUCATION

BSc (Hons) in Software Engineering

NSBM Green University • GPA: 3.62 / 4.0 • 11/2027

PROJECTS

MediCare HMS — Healthcare & Inventory Management System • 01/2026

- Designed a 21-table relational database normalized to 3NF in SQL Server, including a full ER diagram, relational mapping, and data dictionary.
- Developed 4 triggers, 4 views, 4 user-defined functions, and 4 stored procedures in T-SQL to manage complex hospital data workflows.
- Built a REST API with 25+ endpoints using Node.js and Express.js, implementing CRUD operations with parameterized queries via the mssql driver.
- Engineered cascading delete logic to safely handle foreign key dependencies and preserve database integrity.
- Built 7 React front-end pages with a dark-themed UI matching the Figma prototype, including role-based access control for Admin, Doctor, Receptionist, and Pharmacist roles.
- Integrated a live Business Intelligence dashboard using Recharts, powering 4 real-time data visualizations.

Food Cart — Food Ordering Web App • 01/2025

- Built a full food-ordering application using React 19 and Vite with a component-based architecture.
- Implemented global cart state via React Context API (CartContext), eliminating prop drilling.
- Used useState and useEffect hooks for add/remove logic and real-time cart total calculation.
- Integrated React Router DOM for multi-page navigation across Home, Cart, and About views.

Drona & Viber — UI/UX Design & App Redesign Framework • 01/2025

- Conducted a heuristic evaluation of Viber to identify layout bottlenecks and authored usability reports.
- Redesigned Viber's Home/Chats screen in Figma to improve visual hierarchy and reduce cognitive load.
- Created user flows, wireframes, and end-to-end layouts for the new Drona application platform.
- Built a reusable Figma design system to ensure interface consistency across screens.
- Developed high-fidelity interactive prototypes in Figma to simulate and validate workflows.

Task & Analytics Management System (Mini-ERP)

- Built a full-stack task management web app with a secure JWT-based authentication system, including bcrypt password hashing and protected routes on both frontend and backend.

- Implemented full task management (CRUD) — create, edit, and delete tasks with title, description, due date, and priority level.
- Designed a task status workflow (To Do → In Progress → Completed) to model real-world productivity tracking.
- Developed a real-time analytics dashboard with a donut chart for task-status breakdown, a bar chart for priority breakdown, and live KPI cards for active, completed, and overdue tasks.
- Designed a relational database schema (Users → Tasks) using Prisma ORM with MySQL.
- Built a fully responsive UI across mobile, tablet, and desktop breakpoints using Tailwind CSS.

SKILLS

Android Studio, Dart, Firebase (Auth, Realtime DB), Flutter

Frontend: CSS, HTML, JavaScript, React, Recharts, Tailwind CSS, TypeScript, Vite

Backend: Express.js, JWT Authentication, Node.js, REST APIs, Spring Boot

Databases & ORM: Firebase (Firestore), MySQL, Prisma ORM, SQL Server (T-SQL)

UI/UX Design: Design Systems, Figma, Prototyping, User Research, Wireframing

Tools: Git, GitHub, Postman, VS Code

Languages: Java, JavaScript, Python , TypeScript
