### PROFESSIONAL SUMMARY

Motivated Software Engineering undergraduate with a strong foundation in frontend and backend development. Proficient in JavaScript, Python, Node.js, Express, React, and SQL database design. Experienced in architecting secure CRUD systems, building responsive web applications, and implementing RESTful APIs.

### EDUCATION

#### NSBM Green University

Nov 2027

BSc (Hons) in Software Engineering

GPA: 3.62 / 4.0

### CERTIFICATIONS

AZ-900 Microsoft Azure Fundamentals, Microsoft

Feb 2025

Career Essentials in Software Development, Microsoft

Dec 2024

### PROJECTS

#### Multivendor E-Commerce website

Jul 2026 to Sept 2026

Architected a scalable full-stack multi-vendor marketplace streamlining secure operations between buyers, vendors, and platform administrators. Built with a normalized relational database, responsive component architecture, and enterprise-grade security.

- **Engineered Role-Based Access Control (RBAC):** Implemented JWT authentication and authorization middleware to govern secure access across Admin, Seller, and Customer dashboards.
- **Implemented Row-Level Data Isolation:** Programmed server-side validation and SQL procedures to enforce strict vendor ownership, preventing cross-tenant inventory manipulation.
- **Developed High-Performance REST APIs:** Built complete CRUD endpoints utilizing Express and SQL Server for real-time category hierarchies, SKU tracking, and product catalogs.

#### MediCare HMS — Healthcare & Inventory Management System

Feb 2026 to Mar 2026

- Architected a robust backend file and records management application utilizing Python for core business logic and SQL for data persistence.
- Implemented full Create, Read, Update, and Delete (CRUD) operations, handling structured database queries and optimizing record retrieval.
- Designed normalized relational database schemas ensuring data integrity, exception handling, and secure data storage.

#### Drona & Viber — UI/UX Design & App Redesign Framework

Jan 2025

- Conducted a heuristic evaluation of Viber to identify layout bottlenecks and authored usability reports.
- Redesigned Viber's Home/Chats screen in Figma to improve visual hierarchy and reduce cognitive load.
- Created user flows, wireframes, and end-to-end layouts for the new Drona application platform.
- Built a reusable Figma design system to ensure interface consistency across screens.
- Developed high-fidelity interactive prototypes in Figma to simulate and validate workflows.

## SKILLS

---

- |                   |                          |                                |                 |
|-------------------|--------------------------|--------------------------------|-----------------|
| • Design Systems  | • Figma                  | • Prototyping                  | • User Research |
| • CRUD Operations | • Database Normalization | • Data Structures & Algorithms | • Git           |
| • GitHub          | • Microsoft Excel        | • MySQL                        | • CSS3          |
| • HTML5           | • JavaScript             | • Python                       | • SQL           |
